

Effect of Introversion on Income

About the Documentation Folder

Olivia Larsen (orl1), Robin Park (yp1), Jacob Watt-Morse (jww2)

The **documentation folder** holds the data we used within our research, and information regarding the data.

The **data folder** holds two copies of the dataset created by the American Census Bureau and Bureau of Labor Statistics: American Time Use Survey (2010). Because the dataset provided was already in Stata format and thus importable, the original and the importable folders have identical contents. The relevant folders are dataset 4 (DS0004), dataset 5 (DS0005), and dataset 6 (DS0006).

The **metadata folder** holds more information about the origins of the data and pertinent citation information. Attached in the **supplementary metadata folder** is the ATUS codebook, which provides information about the variables included in the ATUS.

The **do files folder** holds the do files that can be executed in Stata to replicate our results. To do so, download the data set, taking care to include DS004, DS0005, and DS0006 datasets in one folder (we provide such a folder, titled **REPLICATE**, for convenience) and setting the working directory in Stata to that folder. Then, run the do file titled “Import/Cleaning.do,” and run the do file titled “Results.do.”
